

Kévin JAMET

Graduate Embedded Systems Engineer

Graduated from EPITA in 2026

Seeking a full-time Embedded Systems position from October 2026.

About me

Publications

Why is latency between the peripheral and the game engine so important in E-sports?

Interests

Languages, Science, IT, Philosophy, Astronomy, Human Relations, Cooking

Travels

Ireland (International Semester, Dublin - 2023)
England (School trip to London - 2019)
Italy (School trip to Rome, Pompeii - 2018)
China (School trip to Beijing, Xi'an - 2018)
United States (Western United States, 2013)

Qualifications and Languages

UPEC Bachelor's degree (obtained in 2024)
English (TOEIC, 835/990, obtained in 2024)
English (Cambridge First, obtained in 2021)
BAC (European Section, honors, obtained in 2021)
Chinese (HSK 3, obtained in 2020)

Training and Certifications

PSCI - First Aid Certificate
Occupational Health and Safety Training

Portfolio and Projects

Education

EPITA

Engineering Degree in Computer Science (Mathematics, Computer Science, Electronics and Embedded Systems, Languages, Project Management, Law...) 2021 — Present

UPEC Bachelor's Degree in Computer Science

2024

International semester - Ireland

Dorset College (Dublin) — (Web Development, OOP) 2022 — 2023

Experience

Final-Year Internship - Embedded Engineer - Elsys Design

March 2026 - August 2026

- Explored RISC-V architecture and ISA for industrial applications.
- Integrated a non-compatible RISC-V SoC on a Xilinx FPGA, including hardware architecture review, I/O and timing constraints.
- Boot process modifications OpenSBI, U-Boot et Linux.
- Produced consulting-oriented documentation for future projects and organized weekly meetings.
- **Technical environment:** Xilinx FPGA, SystemVerilog, Tcl, OpenSBI, U-Boot, Linux
- **Skills:** Datasheet analysis, hardware integration, consulting

GISTRE Major Representative - EPITA

2025

- Served as a liaison between students, administration and teaching staff during plenary meetings.
- Identified student needs, proposed solutions and followed up on improvement actions.

Software Internship - Safran (Massy)

September 2024 – January 2025

- Developed a Language Server for the PsyC language in Rust.
- Wrote the LR grammar with Tree-sitter for the latest version of PsyC.
- Implemented LSP features using TowerLSP.
- **Technical environment:** Rust, LSP, Tree-sitter, TowerLSP, PsyC, Nvim
- **Skills:** Specification analysis, feature implementation, LR grammar analysis and design, software integration

Projects

Decathlon: Final year project

March 2025 – February 2026

- Migrated sports watch firmware to Zephyr RTOS [NDA].
- Drafted project specifications, technical specifications, a test and validation plan, and a Gantt chart.
- Designed the software architecture and coordinated team deliverables.
- Configured sensors using Device Tree and Zephyr patches.
- **Technical environment:** C, Nordic, Zephyr, GitLab, Device Tree
- **Skills:** Datasheet analysis, software design, team and project management.

DRIL: Development of a Linux driver for MFRC522

October 2025

- Developed a Linux driver in C to manage multiple MFRC522 RFID card readers on a single device.
- **Technical environment:** C, Linux driver, RFID, MFRC522
- **Skills:** Specification analysis, troubleshooting

Skills

- **OS :** Windows, WSL, Linux (Ubuntu, NixOS, Arch, Fedora)
- **Languages :** C, Rust, Python, Bash, x86 Assembly, Typst, C++, CUDA, VHDL, SystemVerilog, LaTeX
- **Embedded Systems :** Zephyr RTOS, Device Tree, Linux drivers, RISC-V
- **Tools :** Git, GitLab, GitHub, GDB, STM32CubeIDE, KiCad, Linux, Neovim, Typst, Zen browser, Hyprland/i3, ZSH, VS Code, draw.io
- **Methods :** Drafting of requirements documents and technical specifications, software architecture design, analysis of datasheets, testing, technical documentation
- **AI :** ChatGPT, Gemini, Claude, Perplexity, Opencode, Antigravity, Ollama
